[Insert title of invention]A System for Securities Exchange with Price Instability Alerts that are triggered when a security moves outside "pre-set"and/or Dynamically Calculated trading Price Ranges Over a Network

Abstract

The current invention is a securities system which has price instability alerts that are triggered when a security moves outside a "pre-set"and/or dynamically calculated price ranges. The system creates a static price instability alert and a separate dynamic price instability alert that senses the direction of the security and moves the price instability alert larger or smaller accordingly. This increase the visibility of the security thereby increasing visibility for regulators and potentially reducing fraud and risk OLE_LINK2
